ENGLISH VERSION

**Aerospace series
LOTAR**

Long Term Archiving and Retrieval of digital technical product
documentation such as 3D, CAD and PDM data

**Part 100: Common concepts for Long term archiving and retrieval of CAD 3D
mechanical information**

**Série aérospatiale
LOTAR**

**Archivage Long Terme et récupération
des données techniques produits numériques,
telles que CAD 3D et PDM**

**Partie 100 : Concepts communs pour
l'archivage long terme et la récupération des
données CAO 3D mécanique**

**Luft- und Raumfahrt
LOTAR**

**Langzeitarchivierung und Bereitstellung
digitaler technischer Produktdokumentationen,
beispielsweise 3D CAD und PDM Daten**

**Teil 100: Allgemeine Konzepte für die
Langzeitarchivierung und Wiederverwendung
von 3D CAD Mechanik-Informationen**

This "Aerospace Series" Prestandard has been drawn up under the responsibility of ASD-STAN (The AeroSpace and Defence Industries Association of Europe - Standardization). It is published for the needs of the European Aerospace Industry. It has been technically approved by the experts of the concerned Domain following member comments.

Subsequent to the publication of this Prestandard, the technical content shall not be changed to an extent that interchangeability is affected, physically or functionally, without re-identification of the standard.

After examination and review by users and formal agreement of ASD-STAN, it will be submitted as a draft European Standard (prEN) to CEN (European Committee for Standardization) for formal vote and transformation to full European Standard (EN).

The CEN national members have then to implement the EN at national level by giving the EN the status of a national standard and by withdrawing any national standards conflicting with the EN.

Edition approved for publication

30 April 2012

Comments should be sent within six months
after the date of publication to
ASD-STAN

**Engineering Procedures and
Processes Domain**

Foreword	2
1 Scope	6
1.1 Introduction.....	6
1.2 In scope	6
1.3 Out of Scope	6
2 Normative references	7
3 Terms, definitions and abbreviations.....	7
3.1 CAD 3D mechanical.....	7
3.2 CAD 3D geometry	7
3.3 CAD 3D topology	7
3.4 "Explicit" representation of a CAD model	8
3.5 "Implicit" representation of a CAD model.....	8
3.6 3D Geometric Dimensioning & Tolerancing	8
3.7 Geometrical Product Specifications (GPS).....	8
3.8 3D notes.....	8
3.9 3D annotations.....	9
3.10 Types of information: "Representation" versus "presentation"	9
4 Applicability	9
5 Fundamentals and concepts for Long Term Archiving of CAD 3D mechanical information	10
5.1 Introduction.....	10
5.2 CAD essential information: dependencies on the CAD methods used.....	11
5.3 Dependency of CAD essential information on use case.....	12
5.4 Use cases shared by different aerospace communities	13
5.5 Long Term Archiving and Retrieval of CAD as part of the company risk management.....	14
5.6 CAD reference model for Long Term Archiving of Design intent	15
5.7 Long term archiving of CAD and the maturity of related technologies	16
5.8 Archiving of several files for the same CAD model.....	17
6 Document structure of EN 9300-1XX family	17
6.1 Introduction.....	17
6.2 Link with other EN 9300 parts	18
6.2.1 Link between parts EN 9300-1XX for fundamental and concepts	18
6.2.2 Relationship / linking between the EN 9300- 1xx family.....	18
7 Qualification methods for long term preservation of archived CAD information.....	19
7.1 Introduction.....	19
7.2 Specific qualification processes for long term archiving of CAD models and associated tolerance thresholds	20
7.3 Categorization of CAD archived files according to a risk management analysis	20
7.4 Repair in case of identification of errors after retrieval	21
8 Preservation planning of archived CAD information.....	21
8.1 Introduction.....	21
8.2 Evolution of CAD systems and other related applications (3D viewers...)	22
8.3 Creation of new validation properties and verification rules.....	23
8.4 Evolution of ISO standards of the related relevant recommended practises	23
8.5 Evolution of business requirements	23
8.6 Review of the preservation planning policy	23
9 Administration and monitoring.....	24
10 Definition of Archive Information Packages for CAD data.....	25
10.1 Content Information	25

10.2	Preservation Description Information (PDI).....	26
10.2.1	Reference information.....	26
10.2.2	Context Information.....	27
10.2.3	Provenance Information.....	27
10.2.4	Fixity Information.....	27
10.2.5	Application of PDI data for LTA of 3D CAD information.....	28
10.3	Packaging Information.....	29
10.4	Descriptive Information (DI).....	29
Annex A (informative)	The Evolution of CAD Systems	31
Annex B (informative)	Overview of the main types of CAD 3D mechanical information.....	32
Annex C (informative)	Overview of CAD mechanical assembly structure information	34
Annex D (informative)	Template for the table of contents of a part of the family EN 9300-1xx	37
Annex E (informative)	Considerations for long term preservation of CAD 3D information	38
Annex F (informative)	Definition of a representative sample of test cases.....	46
Annex G (informative)	Example of performance indicators used to manage longevity of CAD archived information	48
Annex H (informative)	Overview of maturity of the main components for long term archiving of CAD mechanical information.....	50

Figures

Page

Figure 1 — 3D annotation	9
Figure 2 — Illustration of the major generations of CAD systems.....	10
Figure 3 — Type of CAD essential information to archive, depending on the CAD methods used.....	11
Figure 4 — Links between Use Cases, essential information and EN 9300 1xx parts	12
Figure 5 — Different levels of commonality of business requirements and use cases.....	13
Figure 6 — Long term preservation of CAD and risk management	15
Figure 7 — Migration strategies	16
Figure 8 — Detail level of EN 9300 part related to description of fundamentals & concept.....	18
Figure 9 — Relationship / linking between the EN 9300-1xx Family	18
Figure 10 — Mapping of OAIS information package objects onto EN 9300	25
Figure 11 — Main files of the PDI with the associated 3D model shape.....	28
Figure A.1 — Illustration of generations of CAD systems for mechanical design	31
Figure B.1 — Definition of a 3D explicit shape representation.....	32
Figure C.1 — 3D CAD assembly structure	34
Figure C.2 — Example for a nested CAD assembly	34
Figure C.3 — CAD assembly using coordinate placement	35
Figure C.4 — CAD assembly using mating conditions.....	35
Figure C.5 — Explicit 3D CAD assembly structure information which includes GD&T	35
Figure C.6 — Use cases of CAD assembly archiving	36

Figure E.1 — Tolerance distance for points 39

Figure E.2 — Engineering tolerance vs. CAD kernel tolerance 39

Figure E.3 — Tolerances of key characteristics for manufacturing and tolerances of essential information of CAD models for LT Preservation..... 40

Figure E.4 — View of different levels of information in 3D CAD design..... 41

Figure E.5 — Failure to preserve shape following a new CAD system release 42

Figure E.6 — Representation change due to change of CAD system release..... 42

Figure E.7 — CAD archived model as the master model for the released design..... 43

Figure E.8 — Main types of use cases of CAD models (STEP archived and native) after release 44

Figure G.1 — Example of performance indicators used for the Ingestion process 48

Figure G.2 — example of performance indicators used for the Retrieval process 49

Figure H.1 — Current level of maturity of components for the main types of CAD mechanical information..... 50

Table	Page
Table 1 — Types of business requirements and use cases to be shared within a particular aerospace community.....	14
Table 2 — Document structure of EN 9300-1XX family	17
Table E.1 — Engineering tolerances view from information system (CAD kernel).....	39
